-!-FUNCTION: The proteasome is a multicatalytic proteinase complex which is characterized by its ability to cleave peptides with Arg, which is characterized by its ability to cleave peptides with Arg, Phe, Tyr, Leu, and Glu adjacent to the leaving group at neutral or slightly basic pH. The proteasome has an ATP-dependent proteolytic activity (By similarity).
-!- CATALYTIC ACTIVITY: Cleavage at peptide bonds with very broad
                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           proteolytic pathway.
-!- SUBUNIT: The proteasome is composed of at least 15 non identical subunits which form a highly ordered ring-shaped structure (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Nematoda; Chromadorea; Rhabditida; Rhabditoidea;
Rhabditidae; Peloderinae; Caenorhabditis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             sumilarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic and nuclear (By similarity).
-!- SIMILARITY: Belongs to peptidase family T1A.
                                                                                                                                                                                                                                                                                                                                                                                 16-OCT-2001 (Rel. 40, Created)

-1- COFACTOR: Binds 2 magnesium ions per subunit (By similarity).
-1- PATHWAY: Thiamine blosynthesis.
-1- PATHWAY: Thiamine blosynthesis.
-1- SIMILARITY: Belongs to the Thz kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

Dev. 76:197-201 (1998).

Liberthouse Transcription repressor capable of inhibiting the transcription repressor capable of inhibiting the transcription capability of B47. May play a role in regulating transcription capability of E47. May play a role in regulating antigen-dependent B-cell differentiation.

Subunt: Efficient DNA binding requires dimerization with another bench protein. Binds DNA as a homodimer or a heterodimer. Forms a heterodimer with E12/E47.

SUBCELLULAR LOCATION: Nuclear.

COUNTIONS REPECTIOTY: Expressed in lymphoid tissues, B-cell lines and activated B cells.

COUNTION: Ref.1 sequence differs from that shown due to a frameshift in position 189.

                                    To the G box (5'-CACGTG-3').

Subuntry: Homodimer (Probable). Can form a heterodimer with REP1.

Phytochrome B binds specifically to DNA-bound PIF3, but only upon red light induced conversion to the Pfr form (PfrB). Reconversion to Pr form causes rapid dissociation.

SUBCELLULAR LOCATION: Nuclear.

SUBCELLULAR LOCATION: Nuclear.

SIMPLARITY: Contains 1 basic helix-loop-helix (bHLH) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
phytochrome signaling pathway. Activates transcription by binding

-!- FUNCTION: Receptor for thymic stromal lymphopoietin (TSLP). Forms a functional complex with TSLP and IL/TR which is capable of stimulating cell proliferation through activation of STAT3 and STAT5. Also activates JAK2. Implicated in the development of the hematopoietic system.
-!- SUBCELIGIAR LOCATION: Type I membrane protein (isoform 1 and isoform 3). Secreted (isoform 2).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              "Functional annotation of a full-length mouse cDNA collection.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IsoId=Q8CII9-2; Sequence=VSP_008788, VSP_008789;

SECRETED AFTER CLEAVAGE OF ITS C-TERMINUS (BY SIMILARITY).
-!- SIMILARITY: Belongs to peptidase family $1.
-!- CAUTION: Ref.1 sequence differs from that shown due to a frameshift in position 339.
                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              J. Am. Soc. Nephrol. 11:828-834 (2000).
-!- FUNCTION: Possesses a trypsin-like cleavage specificity (By similarity). Activates amiloride-sensitive sodium channels.
-!- SUBDNIT: Heterodimer of two chains, light and heavy, held by a disulfide bond (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                     16-OCT-2001 (Rel. 40, Created)

Publication No. US20030233675A1

GENERAL INFORMATION:

APPLICANT: Gao, Yongwei

APPLICANT: Glater, Steven C.

APPLICANT: Gladman, Barry S.

APPLICANT: Goldman, Barry S.

TITLE OF INVENTION: EXPRESSION OF MICROBIAL PROTEINS IN PLANTS FOR PRODUCTION OF;

TITLE OF INVENTION: EXPRESSION OF MICROBIAL BROYER S.

TITLE OF INVENTION: UNMER: US/10/369,493

CURRENT APPLICATION NUMBER: US/10/369,493

CURRENT FILING DATE: 2003-02-28

PRIOR FILING DATE: 2002-02-21

NUMBER OF SEQ ID NOS: 47374
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APPLICANT: Terry, Roemer D.
